PowerTRAC

Control Unlimited Possibilities

PowerTRAC, the latest software from Extech Electronics Co. (EEC), puts complete control in the hands of EEC power source users. The software supports the full range of AC or DC power source systems – even bundled options – automatically configuring for optimal settings. The software easily collects the footprint for each test with fast, automatic data recording functionality, quickly exporting information to Microsoft Excel or txt file format for future data analysis. PowerTRAC plug-and-play software recognizes your system instantly, transferring control right to your monitor, maintaining optimal operational efficiencies at your manufacturing facility.

Features

- Easily to get control of your system with auto detect function, which quickly configures your system settings via your monitor, including the selected system options.
- Flexible live parameter settings in Manual Mode allow users to quickly change the voltage and frequency values even while outputting the power.
- Plan testing steps from Program Mode with up to 400 pre-set modes for continuous, uninterrupted testing and greater efficiency.
- Users can live preview waveforms, zooming in and out and panning scrutinize different steps in detail, allowing quick identification the faulty configurations.
- Efficiently collect the footprint on each test with fast automatic data recording function, quickly exporting information to Excel spreadsheet or txt file for future analysis.
- Full support on AC and DC power sources and its bundled options.

Compatibility

Low Power

6600 Series
6700 Series
EAB Series
EAC Series
EAL-5000 Series

High Power

6300 Series
6500 Series

System Requirements

Hardware	National Instruments GPIB interface card GPIB connection cables
Operating System	Windows 7, Windows 8, Windows 10
Processor	Pentium or AMD Processor (Above 1GHz of speed is recommended)
Memory	Minimum 2GB RAM (Recommended 3GB)
Storage	620MB free disk space
